# November 2026

New Updates & Features · https://learnpcr.pcrecruiter.net/site/docs/changelog/november-2026/

This update brings a complete refresh to the Calendar in PCRM, resolves errors for Outlook and AI writing tools, and includes a round of fixes.

## New Calendar

A new **Calendar** page replaces the old scheduler. Open it from **Calendar** in the main menu. Links and bookmarks to the old Schedule page open the new Calendar.

- **Day, Week, Month or List.**
  Pick the view that suits you. Use **Today** and the previous and next arrows to move around, and the small calendar to jump to a date.
- **Create and edit items in one panel.**
  Click **New**, or click an empty time on the calendar. Give an item a title, date, start time and duration, location and notes, or mark it **All day**. Link it to a name, company or position, and use **Open record** to go to that record.
- **Drag to reschedule.**
  In Day and Week view, drag an item to move it, or drag its top or bottom edge to change its time.
- **Repeating items.**
  Set an item to repeat daily, weekly, monthly or yearly, and choose when the series ends. When you edit or delete a repeating item, choose **This occurrence** or **Entire series**. If you move the start date of a series, the days you already removed stay removed.
- **Send a calendar invite.**
  Use **Create & send invite** to email an invite when you save the item, or **Send invite** on a saved item. Editing an item does not email the people you invited, so send the invite again after a change.

- **Join online meetings.**
  Items with a Zoom, Microsoft Teams, Google Meet, Webex, RingCentral or GoTo link in the location show a join button.
- **Reminders.**
  Use **Remind me** to choose how long before an item you get a reminder.
- **Item types.**
  Use **Manage item types** to add, rename, color or remove types, and filter the calendar by type. Every type must have a name, and a type that has items in the current view can't be removed.
- **Correct times around daylight saving.**
  Items made on the days the clocks change, in early March and early November, no longer show an hour off.

## Pipeline

- **Send email when you move a candidate out of process.**
  When you move a candidate to an out-of-process reason (such as a rejection reason) that asks for details, the window now has an **Email** tab next to Notes, the same as regular steps. The reason's default letter is already filled in. If the reason is set to **Send by default**, the Send Email switch is already on and the candidate is already ticked. Review or edit the letter, and it goes out when you click **Save step**. To record the move without sending anything, switch Send Email off before you save.
- **The older pipeline screen loads faster.** The pipeline screen still used on candidate and company records now loads up to three times faster.

## Integrations

- **Outlook Portal error fix.**
  After a recent Microsoft Office update some users saw an "Error Initializing Browser" message, or a blank window, when the Portal opened a window. This has been fixed in Outlook Portal v. 2.0.0.531
- **MCP in Microsoft 365 Copilot & Meta Muse.**
  The PCRecruiter connector for AI has been confirmed to function in Meta's Muse AI and Microsoft Copilot with proper permissions and setup. See the MCP Server documentation.

- **AI writing tools updated to new model.**

  The AI Generator for job descriptions and candidate summaries, and the AI Email Generator have been updated to a newer ChatGPT model.
